P. SMALLEY, N. SIMMONS/BLM PRICE/WILDHORSE/JUNE 93/PG1

RECEIVED

JUL 02 1993

DIVISION OF
OIL GAS & MINING

Ms. Penelope J. Smalley
Area Manager
USDOI BLM
900 North 700 East
Price, UT 84501

Dear Ms. Smalley:

Thank you and your fine staff for all your assistance throughout the year.

Following, please find a NOTICE: DISTURBANCE OF 5 ACRES or LESS pursuant to 43 CFR 3809.1-3. NOTICE for assessment activities related to the mining position referred to as UMC 215873 ET. AL. .

MINING CLAIMANT: Craig Evan Royce 311 Duke Road #12 Lexington, KY 40502. The operator will be the same with assistance. Any changes of operator shall be reported promptly.

STATEMENT DESCRIBING ACTIVITIES: Maintenance of existing access to the UMC 215873 ET. AL. mineral position. These shall occur in Sections 11 and 10, Unsurveyed Township 25 S. Range 11 E. approximately 1.7 miles south on the Goblin Valley Road on the roads west side. . Access route first cut by EXXON Corporation when claims were maintained by EXXON during the late 1970's. It is clearly visible. (Maps follow).

Because the crowns of the access routes have been built up and native flora and fauna have revegetated, and in keeping with the character of the immediate environment, work will be of a manual nature. Wash-outs will be filled with stones carried from Wild Horse Creek. Stone work is also used to support the sides of the existing cut.. No cuts will exceed 3 feet (new Cuts). Where applicable, base will be built towards crown. Extensive manual effort will disturb several 1/8-1/10 acre sections of this existing access. This existing access route was cherrystemmed out of the UT-060-028A WSA and work will not enter UT-060-028A unless a Plan of Operations is submitted. Work will occur on the Carmel Formation. Because this is a loosely cemented aggregate formation, natural run off of water basically reclaims a section of this route with each heavy season (rain) and also assists in revegetation.

Extensive handwork is also projected to disturb a like amount of surface of the existing mine prospecting and

and access to Wild Horse Spring (See Map). This access road was maintained by Exxon and reported to have been cut by the Union Mines Development Corporation for the Manhattan Engineer District. Again the existing natural contours will be filled and followed.

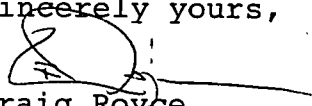

Reclamation of all areas disturbed will follow the standard, if needed, however only existing development will be maintained. The waste produced will not cause unnecessary or undue degradation. All manmade garbage transported in will be transported out.

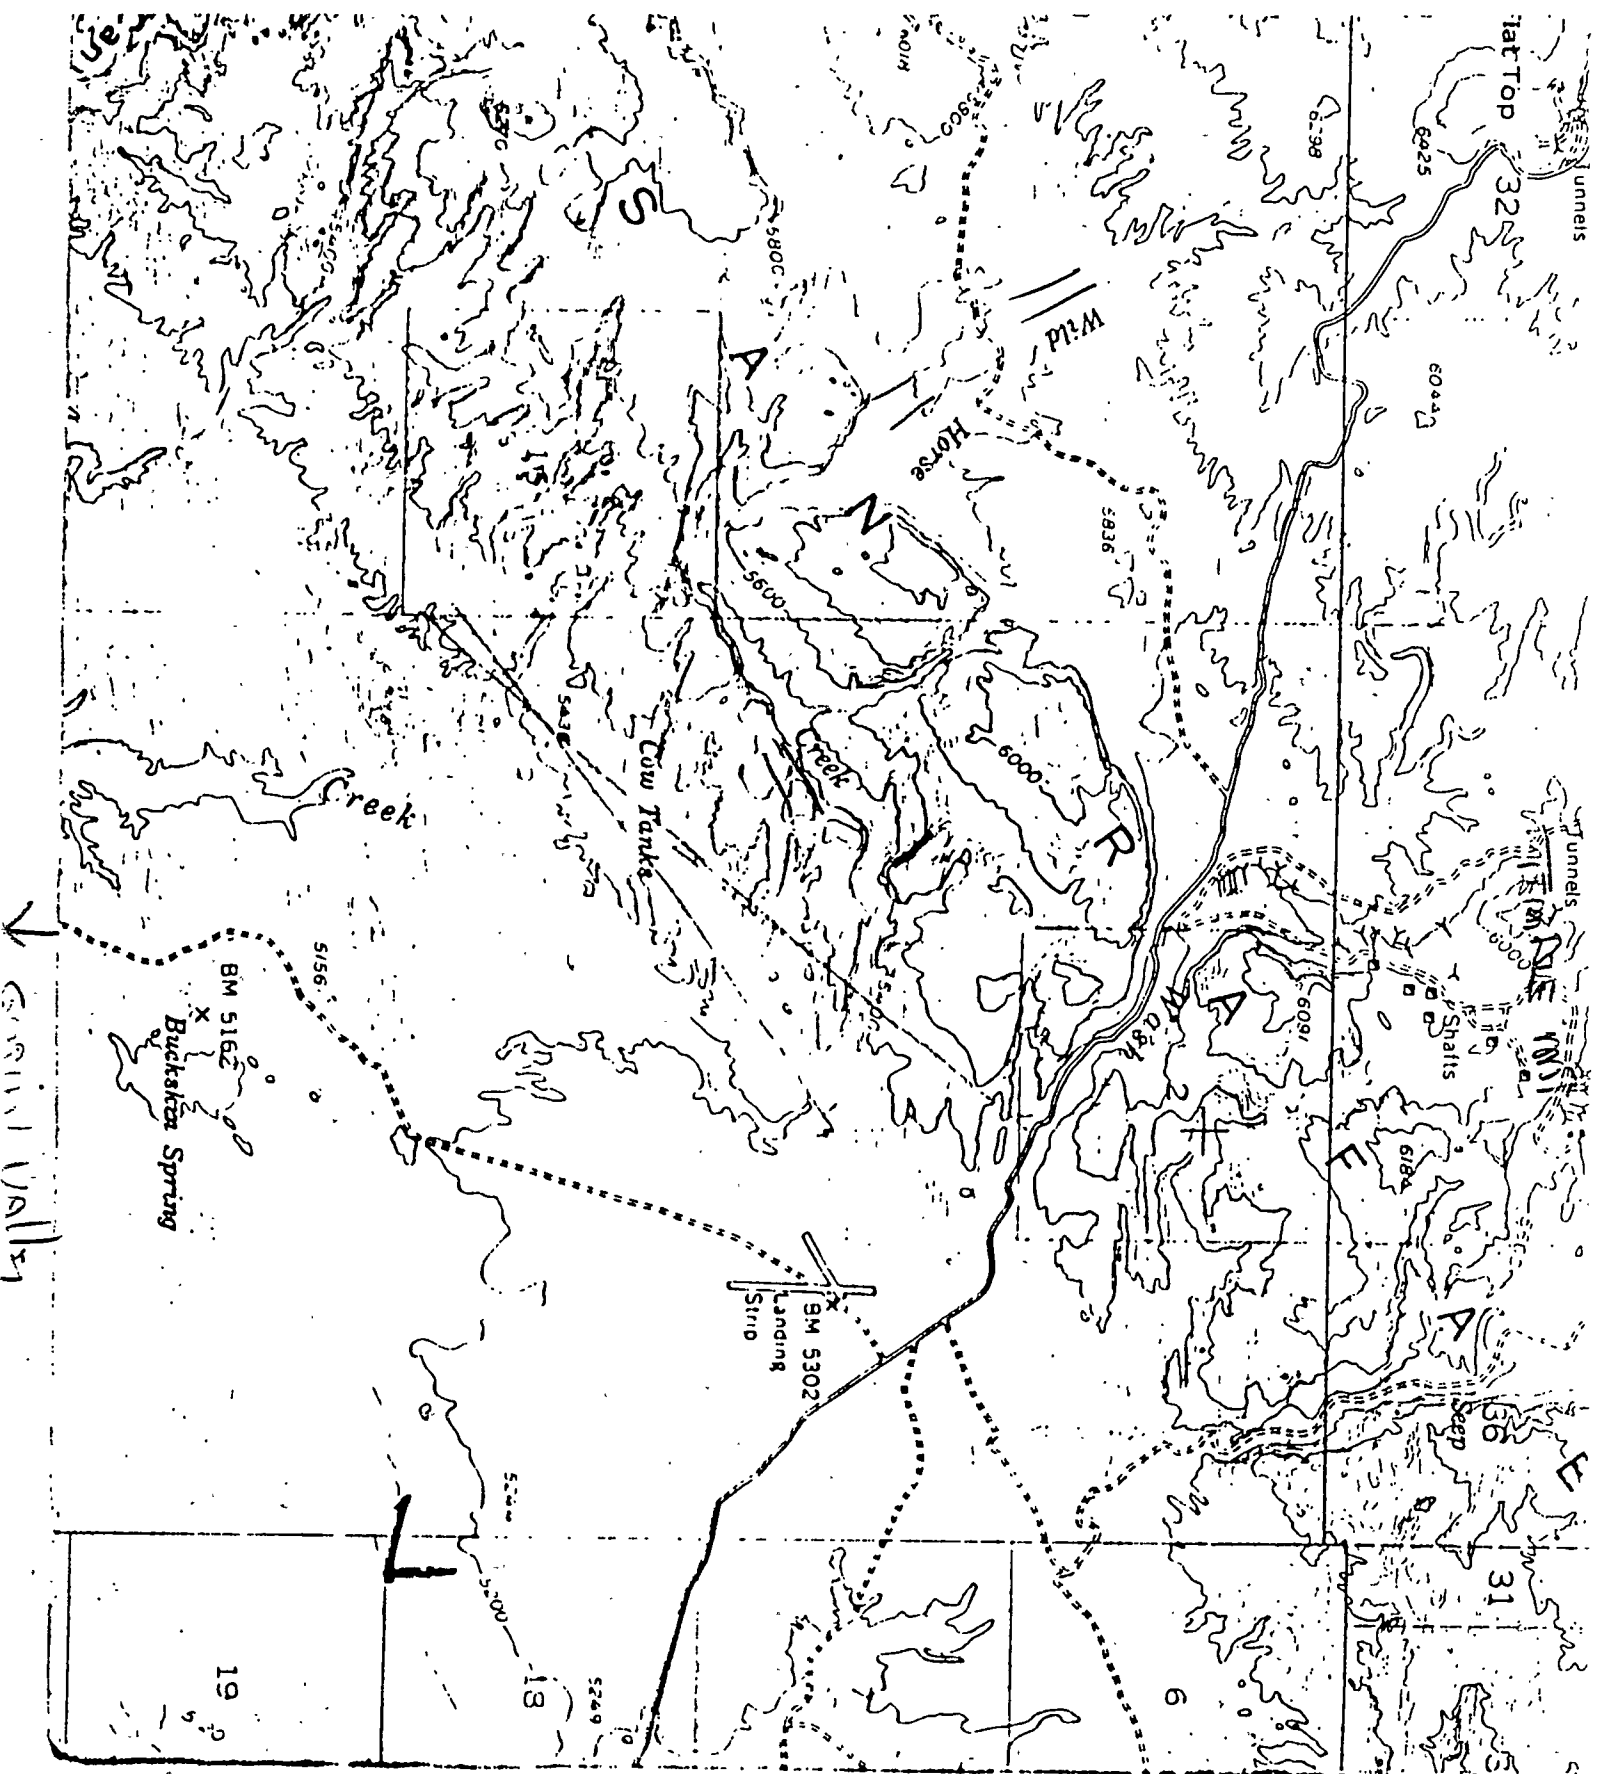

All topsoil is saved and measures are taken to control erosion and water runoff.

All other aspects of 43 CFR 3809.1-3 will be adhered to as deemed by the authorized officer

Project will begin in early July, 1993.

Sincerely yours,

Craig Royce
